

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–1999) and is projected to increase by a further 1.5 million by 2010 (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase by 2.5 million by 2020 (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources. The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources.

The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources. The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources. The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources.

The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources. The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources.

The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources. The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources.

The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources. The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources.

The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources. The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources.

The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources. The Department of Health (1999) has identified the need to develop a new approach to the care of the elderly, one that is based on the principles of partnership, shared responsibility and shared resources.

The first part of the paper discusses the importance of understanding the cultural context of the research. It highlights the need for researchers to be sensitive to the values and beliefs of the communities they are studying. This is particularly important in the field of education, where cultural differences can significantly impact learning outcomes. The paper then moves on to discuss the challenges of conducting research in diverse cultural settings. It notes that researchers often face difficulties in establishing rapport with participants and in interpreting their responses. To address these challenges, the paper suggests several strategies, including the use of local researchers and the development of culturally appropriate research instruments. The final part of the paper discusses the importance of ethical considerations in cross-cultural research. It emphasizes the need for researchers to obtain informed consent from participants and to ensure that the research is conducted in a way that respects the dignity and rights of all individuals.
